

## **DMS Participates in Virtual Open House**

---

Due to the ongoing COVID pandemic, Lincoln University once again held its annual open house event in virtual form this month. This event is of vital importance to help prospective students determine whether Lincoln University and its various academic programs are the right fit for them.

New department secretary, Ms. Cecilia Gatheca, did an excellent job organizing the department's virtual booth, fliers, and other recruitment material, as well as coordinating the participation of our faculty and staff. The event allowed DMS representatives to talk with prospective students about our various math degree tracks and the types of careers and/or graduate programs our alumni have successfully pursued.

After the historic graduation of an incredible seven mathematics majors last year (see our Spring 2020 newsletter), DMS is eager to serve a new generation of Lincoln students. Our department has an exceptional placement record in competitive employment and graduate studies opportunities, from major companies such as Amazon and Google to prestigious universities like Bentley University and Pennsylvania State University. We hope that we can continue to prepare many Lincoln students for the variety of extraordinary career opportunities that await those who put in the time and effort to develop their mathematics knowledge and quantitative reasoning skills.
